### SCIENCE PRACTICAL

Dear Parents

**Hope you and your families are safe & healthy!**

As we are moving ahead in these unprecedented times, the responsibility of school education has increased manifold in the teaching and learning of conceptual knowledge through virtual modes. At the secondary level it is very important to promote the scientific temper in students. In the words of Pandit Jawahar Lal Nehru, "Scientific temper is the temper of a free man."

The Scientific temper is a way of life which uses the scientific method and which may, consequently, include questioning, observing physical reality, testing, hypothesizing, analysing, and communicating.

Although, the students have been away from the school laboratories for almost a year now, we at Bal Bharati are in a continuous search of ways and methods to give a hands on experience of practical knowledge to our students.

Following this approach, an experiential learning session with demonstration of hands on activities on the Topic – ' **LIGHT** ' has been organised for class X students on Friday, 28 May 10:30 – 12 noon through google meet. The session will be taken by an expert in the field.
