

SOLUTIONS TO PREBOARD EXAM 2023

PHYSICS - XII

SET 1

One mark for correct answer.

- |         |         |         |         |
|---------|---------|---------|---------|
| 1. (c)  | 2. (a)  | 3. (b)  | 4. (d)  |
| 5. (c)  | 6. (a)  | 7. (b)  | 8. (d)  |
| 9. (b)  | 10. (d) | 11. (c) | 12. (a) |
| 13. (a) | 14. (b) | 15. (c) | 16. (a) |

17. Definition of Depletion Region:

The small region on either side of the junction in p-n junction diode where the electrons and holes taking part in the initial movement across the junction *depleted* the region of its free charges is known as *depletion region*. ----- 1

Effect on depletion region

- |                                 |                                     |
|---------------------------------|-------------------------------------|
| (i) Forward bias ---- decreases | (ii) Reverse bias ---- Increases--- |
|                                 | - ½ each                            |

OR

Energy band diagrams

In conductors, the forbidden energy gap is almost zero and electrons can move from Valence band to conduction band easily. In insulators the gap is very high and no electron can reach the conduction band. --- 1

18. (a) de-broglie wavelength is given by

$$\lambda = \frac{h}{\sqrt{2mqV}} \quad \text{----- } \frac{1}{2}$$

V is same, so  $\lambda \propto \frac{1}{\sqrt{mq}}$  ----- ½

For  $\alpha$  particle  $m = 4, q = 2$

For proton  $m = 1, q = 1$

$$\frac{\lambda_\alpha}{\lambda_p} = \frac{1}{\sqrt{8}} \quad \text{----- } \frac{1}{2}$$

(b)  $KE = qV$

$$\frac{KE_\alpha}{KE_p} = 2 \quad \text{----- } \frac{1}{2}$$

19. Ray diagram -----  $\frac{1}{2}$

For a prism,  $A = r_1 + r_2; r_2 = 0$  -----  $\frac{1}{2}$

$$A = r_1$$

$$\mu = \frac{\sin i}{\sin r} = \frac{\sin 2A}{\sin A} = \frac{2\sin A \cos A}{\sin A} \quad \text{----- } \frac{1}{2}$$

$$\mu = 2\cos A \quad \text{----- } \frac{1}{2}$$

20. As given  $A_A : A_B = 1 : 6$

$$H = \frac{V^2}{R} = \frac{V^2 A}{\rho l}$$

----- 1

$$\frac{H_A}{H_B} = \frac{A_A}{A_B} = \frac{1}{6}$$

----- 1

21.

-----  $\frac{1}{2}$

For lens  $L_1$

$$\frac{1}{f_1} = \frac{1}{v_1} - \frac{1}{u}$$

For lens  $L_2$ , image  $I_1$  acts as a virtual object and distance  $v_1$  is the object distance. ----  $1\frac{1}{2}$

$$\frac{1}{f_2} = \frac{1}{v} - \frac{1}{v_1}$$

Adding the two equations

$$\frac{1}{f} = \frac{1}{f_1} + \frac{1}{f_2}$$

22. The process of combination of four hydrogen nuclei to form helium is called FUSION. ----- 1

Equation of the Nuclear reaction

Mass defect =  $4 (1.007825 \text{ u}) - (4.002603 \text{ u}) = 0.028697$  ----- 2

Energy released =  $0.028697 \times 931 = 26.716907 \text{ MeV}$

23. Let the charges on the spheres be  $q_1$  and  $q_2$ .

$$q_1 + q_2 = q$$

Let  $\sigma$  = surface charge density

$$q_1 = 4\pi a^2 \sigma \text{ and } q_2 = 4\pi b^2 \sigma \text{ ----- 1}$$

$$q = 4\pi\sigma(a^2 + b^2)$$

$$\sigma = \frac{q}{4\pi(a^2 + b^2)}$$

Potential at the common center  $V = V_1 + V_2$

$$V = \frac{1}{4\pi\epsilon_0} \frac{q_1}{a} + \frac{1}{4\pi\epsilon_0} \frac{q_2}{b} \text{ ----- } \frac{1}{2}$$

-----1

$$V = \frac{1}{4\pi\epsilon_0} \frac{4\pi a^2 \sigma}{a} + \frac{1}{4\pi\epsilon_0} \frac{4\pi b^2 \sigma}{b}$$

Solving

$$V = \frac{q(a + b)}{4\pi\epsilon_0(a^2 + b^2)} \text{ ----- } \frac{1}{2}$$

OR

Energy stored in the capacitor  $E_i = \frac{1}{2} CV^2$

On inserting the dielectric, capacitance  $C' = KC$  and potential  $V' = V/K$  -----  $\frac{1}{2}$

On connecting with uncharged capacitor

Common potential

$$V'' = \frac{C'V'}{C(1+K)} = \frac{CV}{C(1+K)} = \frac{V}{1+K} \text{ ----- 1}$$

Energy stored in the combination

$$E_f = \frac{1}{2}C(1+K)V''^2 = \frac{E_i}{1+K} \text{ ----- 1}$$

$$\frac{E_f}{E_i} = \frac{1}{1+K} \text{ ----- } \frac{1}{2}$$

24. E = - 3.4 eV

(a) K E = - (E) = 3.4 eV ----- 1

(b) P. E. = 2 E = - 6.8 eV ----- 1

(c) If the choice of zero of potential energy is changed, the value of P.E. and total energy will change however K.E. will remain the same. ----- 1

25. When only key K<sub>1</sub> is closed ----- ½

$$I = \frac{E}{R + X}$$

When both K<sub>1</sub> and K<sub>2</sub> are closed ----- ½

$$I' = \frac{E}{R + \frac{XS}{S+X}}$$

Reading of ammeter

---- ½

$$\frac{S}{S+X} I' = \frac{I}{2} \text{ given}$$

$$\frac{S}{S+X} \left( \frac{E}{R + \frac{XS}{S+X}} \right) = \frac{1}{2} \left( \frac{E}{R+X} \right)$$

Solving we get

----- 1½

$$X = \frac{RS}{R-S}$$

26. Expression for the Force  $\mathbf{F} = q(\mathbf{v} \times \mathbf{B})$  ----- ½

Helical Path : If  $\mathbf{v}$  is making an angle with  $\mathbf{B}$ . ----- ½

Circular Path: If  $\mathbf{v}$  is perpendicular to  $\mathbf{B}$ . ----- ½

Since  $\mathbf{F}$  is perpendicular to  $\mathbf{v}$ , power  $\mathbf{F} \cdot \mathbf{v} = 0$ .

$$P = \frac{dW}{dt} = 0$$

Or,  $W = 0$  hence from work energy theorem, Change in KE = 0 or KE = constant ---  
1½

27. Wavelengths: (1 each)

$\lambda_1$  - X - rays --- X-ray tubes or inner shell electrons

$\lambda_2$  - UV rays --- Inner shell electrons in atoms moving from one energy level to a lower level

$\lambda_3$  - Infra red --- Vibration of atoms and molecules

28. Principal of Transformer - Mutual Induction ----- ½

Windings shown in diagram (b) is more efficient because the extent of mutual induction will be more since the coils are wound on each other. ----- 1

Secondary voltage = 22 V, resistance = 440  $\Omega$

Current in secondary = 22/440 = 0.05 A

Output power =  $P = V_s I_s = 22 \times 0.05 = 1.1$  W

$$efficiency = \frac{P_{out}}{P_{in}}$$

$$0.9 = \frac{1.1}{P_{in}}$$

$$P_{in} = 1.22$$
 W

----- 1½

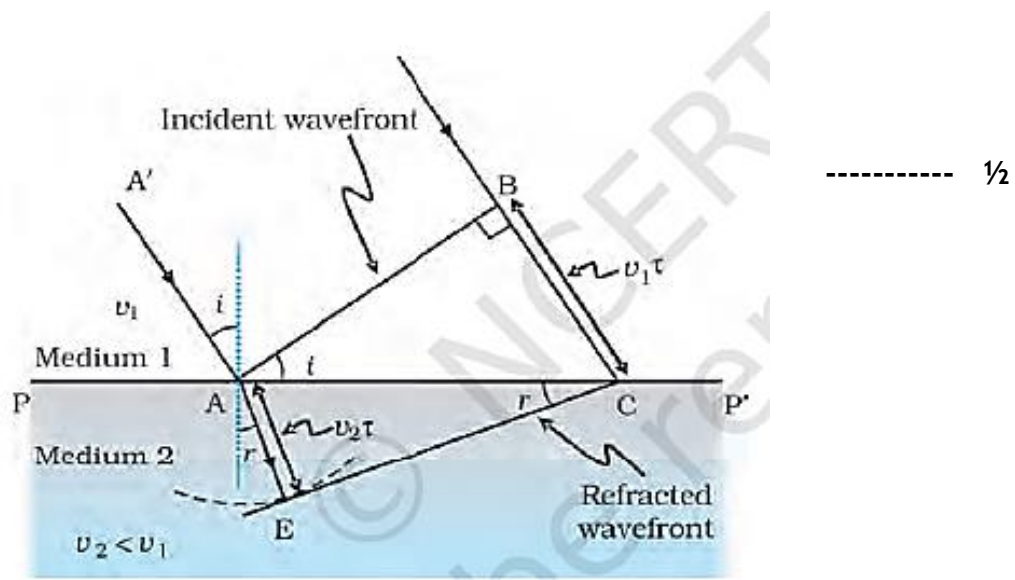

$$P_{in} = V_p I_p$$

$$I_p = \frac{P_{in}}{V_p} = \frac{1.22}{220} = 5.5 \text{ mA}$$

29. (i) (a) (ii) (c) (iii) (b) (iv) (c)

30. (i) (c) (ii) (b) (iii) (a) (iv) (a)

31. Wave front: The locus of all points of the medium oscillating in same phase is called wave front. ----- 1

$$\sin i = \frac{BC}{AC} = \frac{v_1 \tau}{AC}$$

$$\sin r = \frac{AE}{AC} = \frac{v_2 \tau}{AC}$$

$$\frac{\sin i}{\sin r} = \frac{v_1}{v_2} = \mu$$

----- 1½

For diffraction, central maxima is given by

$$\beta = 2 \frac{\lambda D}{d}$$

$$d = 2 \frac{\lambda D}{\beta} = \frac{2 \times 6 \times 10^{-7} \times 0.8}{4.8 \times 10^{-3}} = 0.2 \text{ mm}$$

----- 1

1 mark for diagram

OR

1½

Magnifying power

$$m = \frac{L}{f_o} \left( 1 + \frac{D}{f_e} \right)$$

----- ½

For the telescope

$$\frac{D}{r} = \frac{h}{f_o}$$

$$h = f_o \frac{D}{r} = \frac{3.48 \times 10^6 \times 15}{3.8 \times 10^8} = 13.7 \text{ cm} \text{ ----- } 1\frac{1}{2}$$

The objective of a telescope has a larger aperture so that sufficient light can be gathered to form a bright image of a distance object. ----- 1

The focal length of the objective is kept large to increase magnification. ----- 1/2

32.

**Electric Dipole in External Field**

Let  $\theta$  be angle between the electric field  $E$  and dipolemoment  $p$ , then

Torque on the dipole is  $\tau = p E \sin\theta$

If dipole is rotated by small angle  $d\theta$ , work done

$dW = \tau d\theta$

Work done in rotating the dipole from angle  $\theta_1$  to  $\theta_2$  is

$W = \int_{\theta_1}^{\theta_2} pE \sin\theta d\theta$

$W = -pE (\cos \theta_2 - \cos\theta_1)$

Taking  $\theta_1 = 90^\circ$  as zero of potential and  $\theta_2 = \theta$

$W = - p E \cos \theta$

This work done is stored in the dipole as potential energy ----- 2

$U = - p E \cos \theta = - \mathbf{p} \cdot \mathbf{E}$

Stable equilibrium --  $\theta = 0^\circ$       Unstable equilibrium --  $\theta = 180^\circ$  ----- 1

$\tau = p E \sin\theta$

$= 4 \times 10^{-9} \times (5 \times 10^4) \sin 30^\circ$  ----- 2

$= 10^{-4} \text{ Nm}$

OR

Flux through the Gaussian surface

= flux through the curved cylindrical part of the surface

$$= E \times 2\pi r l$$

The surface includes charge equal to  $\lambda l$ . Gauss's law then give

$$E \times 2\pi r l = \lambda l / \epsilon_0$$

$$\text{i.e., } E = \frac{\lambda}{2\pi\epsilon_0 r}$$

Vectorially,  $\mathbf{E}$  at any point is given by

$$\mathbf{E} = \frac{\lambda}{2\pi\epsilon_0 r} \hat{\mathbf{n}}$$

3

(a) There is no effect on the flux because the result is independent of the shape and size of the Gaussian surface.

(b) Charge enclosed =  $q = \phi\epsilon_0 = -8.85 \text{ nC}$

2

33.

$$V = \sqrt{V_R^2 + (V_L - V_C)^2}$$

$$V_R = IR, V_L = IX_L, V_C = IX_C$$

$$V = I\sqrt{R^2 + (X_L - X_C)^2}$$

Impedance

$$z = \frac{V}{I} = \sqrt{R^2 + (X_L - X_C)^2}$$

Phase difference

----- 2

$$\tan\phi = \frac{V_L - V_C}{V_R} = \frac{X_L - X_C}{R}$$

The current and voltage will be in phase if  $\phi = 0$  and  $X_L = X_C$ .

This condition of the circuit is called RESONANCE

----- 1

(ii) For LR circuit Power factor ----- 2

$$P_1 = \frac{R}{Z} = \frac{R}{\sqrt{R^2 + X_L^2}} = \frac{R}{\sqrt{2R^2}} = \frac{1}{\sqrt{2}}$$

On connecting the capacitor it becomes LCR series circuit and since  $X_L = X_C$ , the circuit is in resonance and Power factor

$$P_2 = 1$$

$$\frac{P_1}{P_2} = \frac{1}{\sqrt{2}}$$

OR

(i) The device is a pure Capacitor.

Reason; The current is leading the voltage by an angle of  $\pi/2$ . ----- 1

(ii) X = ratio of voltage to current is called Reactance ----- 1

$$X = \frac{1}{\omega C}$$

(iii)

-----1

(iv) 1 mark for each

(v)
